DETAILED ACTION

1. Claims 1-30 are pending in the application for examination, wherein claims 1, 11 and 23 being independent.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Brennan et al (US Pat. No. 5,329,578), herein after referred as Brennan.

Regarding claim 1, referring to Figs 1a and 2a-2d, Brennan teaches a software package (e.g., subscriber service profile) comprising:

a source identifying module for determining source data corresponding to a source of incoming telephone calls (see Figs 1a and 2a-2d; and col. 4, ln 67-col. 5, ln 59);

a call handling module including instructions for each of a plurality of call handling modes (see Figs 1a and 2a-2d; and col. 5, ln 60-col. 8, ln 17);

a handling mode selection module determining which call handling mode controls handling of an incoming call based on the source data and a time of receipt of the incoming call (see Figs 1a and 2a-2d; and col. 6, ln 47-col. 8, ln 17).

Art Unit: 2642

Regarding claims 2-10, 12-22 and 24-30, note Figs 1a and 2a-2d; and col. 4, In 67-col. 8, In 17.

Regarding claim 11, referring to Figs 1a and 2a-2d, Brennan teaches a method of controlling operation of a telephone comprising the steps of:

extracting from an incoming call source data corresponding to a source of the call (see Figs 1a and 2a-2d; and col. 4, In 67-col. 5, In 59);

specifying a set of call handling instructions for each of a plurality of call handling modes (see Figs 1a and 2a-2d; and col. 5, In 60-col. 8, In 17);

electing one of the call handling modes for each incoming call received based on the source data and a time of receipt of the incoming call (see Figs 1a and 2a-2d; and col. 6, In 47-col. 8, In 17).

Regarding claim 23, referring to Figs 1a and 2a-2d, Brennan teaches a telephone system comprising:

a source notification device, providing an indication to a call recipient of a source of each of a plurality of incoming calls;

a memory including operating code for controlling operation of the system, the operating code including a plurality of call handling modes which may be applied to incoming calls, and storing call recipient input indicating a corresponding one of the plurality of call handling modes to be applied to an incoming call based on the source data and a time of receipt of the incoming call.

As to claim 23, it is rejected for the same reasons set forth to rejecting claim 11 above, since claim 23 is merely a system for implementing the method defined in the method claim 23.
